

Danaytha Ayuningtyas

Dashboard BI

- KPI Summary Card
- Total Sales
 - Average Sales
 - Number of Items
 - Average Rating
- Filter Panel
- Outlet Location Type
 - Outlet Size
 - Item Type

Business Problem

The company required a centralized dashboard to monitor sales performance across multiple outlets and product categories. Existing reports were static and time-consuming to analyze, making it difficult for management to identify high-performing products and underperforming outlets

DAX Measures

Structure

Formatting

Properties

```
1 Metrics = {
2     ("Total Sales", NAMEOF('BlinkIT Grocery Data'[Total Sales]), 0),
3     ("Avg Sales", NAMEOF('BlinkIT Grocery Data'[Avg Sales]), 1),
4     ("No of Items", NAMEOF('BlinkIT Grocery Data'[No of Items]), 2),
5     ("Avg Rating", NAMEOF('BlinkIT Grocery Data'[Avg Rating]), 3)
6 }
```

Objective

- Monitor overall sales performance
- Identify top-selling and low-performing products
- Compare outlet performance across different locations and sizes
- Analyze customer ratings alongside sales performance
- Support faster operational and strategic decisions

Dashboard BI

Business Problem

The company required a centralized dashboard to monitor sales performance across multiple outlets and product categories. Existing reports were static and time-consuming to analyze, making it difficult for management to identify high-performing products and underperforming outlets.

KPI Summary Card

- Total Products
- Quantity
- Revenue
- Net Revenue
- Profit

Exampel of DAX Measures

```
Tax 5% = SUMX('data sales', 'data sales'[Revenue]*0.05)
```

```
GPM % = DIVIDE('data sales'[Profit], [Net Revenue])
```

Overview

Developed with SQL for data extraction, aggregation, and KPI calculation, this dashboard delivers business intelligence insights into **loan portfolio performance in Branch**. It enables stakeholders to monitor portfolio growth, credit quality, and risk through key lending metrics. 2453 data

Build SQL Editor in:

Function Used:

read_files() - a Databricks-specific function that reads CSV/Excel files from Unity Catalog volumes

Purpose: Ad-hoc analysis and dashboard creation

Internal Components Breakdown

1. Data Source Layers

read_files('/Volumes/...')

Excel file is stored in a Unity Catalog Volume (Databricks' managed storage). The file path shows it's in an internal catalog for Genie file uploads

2. SQL Processing Layer

SELECT, GROUP BY, ORDER BY

Standard SQL operations executed by Databricks SQL engine

Uses Spark for distributed processing.

Comprehensive breakdown of the dashboard

Portfolio Quality Distribution by OJK Rating

Loan Performance by Cycle

Table Output

	loan_cycle	total_disbursed	avg_loan_size	par_loans	par_rate
1	1	Rp 4,450,500,000	Rp 5,323,565	587	70.22
2	2	Rp 4,779,000,000	Rp 6,846,705	433	62.03
3	3	Rp 5,647,000,000	Rp 7,746,228	500	68.59
4	4	Rp 1,738,500,000	Rp 9,150,000	64	33.68

Dashboard of Loan Performance by Cycle

Critical Insights

The portfolio faces significant quality challenges with a 57.96% PAR rate, driven primarily by the "Mitra Limpahan" segment which shows substantially higher delinquency. The concentration of 39% of loans in the "Macet" category and 958 loans with 90+ DPD requires immediate attention. However, newer "Mitra Kelolaan Sendiri" loans and higher loan cycles (Cycle 4) demonstrate better performance, suggesting potential for improvement through enhanced partner management and borrower selection.

Trend Visualization Price Market using Python

Pro Based - Business and Customer Market Analyst at Amartha Financial

Overview

Conducted a market and competitor analysis to evaluate prepaid mobile top-up pricing across digital payment providers. The project identified pricing gaps, analyzed transaction trends, and benchmarked competitors to generate actionable insights that supported pricing strategy, competitive positioning, and business decision-making.

Business Objective

- Benchmark competitor pricing strategies.
- Identify pricing competitiveness.
- Evaluate market positioning.
- Support pricing and product strategy.
- Assess market trends through regression analysis.

Methodology

- Collected competitor pricing data.
- Standardized nominal top-up values.
- Performed regression analysis.
- Compared pricing trends across platforms.
- Evaluated pricing competitiveness.

Project Based - Business and Customer Market Analyst at Amarthha Financial

This project evaluates the performance of PPOB transactions across Agent and Non-Agent channels to identify key business growth drivers, understand customer transaction behavior, and uncover opportunities to enhance the AmarthhaLink service.

Business Analysis Framework

- 1 Data Collection**
- Transaction Volume
 - GMV
 - Monthly Active Users (MTU)
 - Transaction Category
 - Agent & Non-Agent Transactions

- 2 Data Analysis**
- Transaction Trend Analysis
 - Agent vs Non-Agent Comparison
 - Product Category Analysis
 - GMV Analysis
 - User Growth Analysis

- 3 Key Insights**
- Agent transactions increased from 127K to 200K (+57%).
 - More than 70% of PPOB GMV came from Agent transactions.
 - Non-Agent transactions remained around 55K/month.
 - BPJS and PDAM dominated Agent transactions.
 - Electricity Bill and Game Top Up dominated Non-Agent transactions.

- 3 Business Recommendations**

Excel in Fintech Branch Data

Overview

Developed an Excel-based branch performance dashboard to monitor financing, portfolio quality, operational productivity, and collection performance in my fintech branches

Monitoring of Day Past Due

Objective

- Monitor potential loan disbursement by branch
- Identify borrower groups eligible for financing.
- Track financing opportunities by Majelis.
- Support daily branch operational planning.

Example of IFERROR and SUMIF - Daily Target Monitoring

AA34:AA3

fx

=IFERROR(SUMIFS('Daily KP'!\$I:\$I;'Daily KP'!\$N:\$N;\$C34;'Daily KP'!\$U:\$U;"05-12");0)

Temporary filter 1

Rentang: A3:BE116

	A	B	C	D	E	F	G		Y	Z	AA
1											
2											
3	Area	Point	Nama	Posisi	NIK	Tanggal Join	Masa Kerja (Tahun)		03/12 Rabu	04/12 Kamis	05/12 Jumat
4									8,000.000	0	11,000.000
5									9,000.000	0	
6									4,000.000	0	19,000.000
7									5,000.000	0	9,000.000

fx

=IFERROR(SUMIFS('Daily KP'!\$I:\$I;'Daily KP'!\$N:\$N;\$C34;'Daily KP'!\$U:\$U;"05-12");0)

Developed an automated Excel-based monitoring system to track daily employee target achievement. The report utilizes SUMIFS to aggregate daily performance data based on multiple criteria and IFERROR to handle missing values, ensuring accurate and reliable reporting.

Excel Functions for Branch Performance Analysis

X-LOOKUP

Retrieved HST (Hari Setelah Tunggak) data to monitor collection performance, enabling faster identification of overdue borrowers and collection priorities.

V-LOOKUP

Matched borrower or branch information across multiple operational datasets to streamline reporting and reduce manual lookups.

SUMIFS

Calculated daily loan disbursement, repayments, or collection amounts based on multiple criteria such as branch, Business Partner, and date.

COUNTIFS

Counted active borrowers, overdue accounts, or successful collections by branch and Business Partner.

INDEX + MATCH

Retrieved data dynamically from large operational datasets.

IF / IFS

Applied business rules for KPI achievement and portfolio classification.
